
d=32; beta=a=1, h=ln(100), r=20, m=16. Top: sigma shown per curve, F/F0=0.01. Bottom: sigma=0.3, every initial column norm=1.
Mean/min-max across seeds; white rho=0,1 markers are controls. Fixed-Gram/deterministic-spectrum rotations repeat the same dynamics.
Plotted means include unresolved points; per-case sign labels and numerical uncertainty are in the CSV.
